MVC Exercises

We created the user CRUD in MVC together.

Now it's your turn to take action.
(Don't forget the router!)

1. Authentication

Our users can register, but they still can't log in or log out.
For that, we will need the following files:

```
- controller/authController.php
- view/connexion.php (or view/auth/connexion.php)
```

We can reuse the user model for the "SQL" queries.

2. Messages

In the CRUD course, you were tasked with creating the CRUD for user messages.
Well, here we go again — your task is to recreate that CRUD using the MVC structure.

To do this, you'll need the following files:

```
- controller/messageController.php
- model/messageModel.php
- view/message/ ... [read.php, update.php] and optionally delete.php and
create.php
```

Optionally, you can add categories to your messages.
You don't need to build a CRUD for them, but a model will be useful:

```
- model/categorieModel.php
```
